DAVIS ADVANTAGE for Psychiatric Mental Health Nursing

Karyn I. Morgan, Mary C. Townsend

10th Edition

Chapter 1. The Concept of Stress Adaptation

MULTIPLE CHOICE

1. A client has experienced the death of a close family member and at the same time becomes unemployed. The client's 6-month score on the *Recent Life Changes Questionnaire* is 110. The nurse:
1. Understands the client is at risk for significant stress-related illness.
 2. Determines the client is not at risk for significant stress-related illness.
 3. Needs further assessment of the client's coping skills to determine susceptibility to stress-related illness.
 4. Recognizes the client may view the losses as challenges and perceive them as opportunities.

ANS: 3

Chapter: Chapter 1, The Concept of Stress Adaptation

Objective: Explain the relationship between stress and diseases of adaptation.

Page: 5

Heading: Stress as an Environmental Event

Integrated Processes: Nursing Process: Evaluation

Client Need: Psychosocial Integrity

Cognitive Level: Application [Applying]

Concept: Stress

Difficulty: Moderate

	Feedback
1.	This is incorrect. Assessment is the first step of the nursing process. The nurse should assess the client's coping skills and available support before determining susceptibility to stress-related physical and psychological illnesses. The <i>Recent Life Changes Questionnaire</i> is an expanded version of the <i>Schedule of Recent Experiences</i> and the <i>Rahe-Holmes Social Readjustment Rating Scale</i> . A 6-month score of 300 or more or a year-score total of 500 or more indicates high stress in a client's life and susceptibility to stress-related illnesses.
2.	This is incorrect. Assessment is the first step in the nursing process. The nurse should assess the client's coping skills and available support before determining the client's perception of the current stresses. A 6-month score of 300 or more or a year-score total of 500 or more on the <i>Recent Life Changes Questionnaire</i> indicates high stress in a client's life and susceptibility to stress-related physical and psychological illnesses.
3.	This is correct. Assessment is the first step in the nursing process. The nurse should assess the client's coping skills and available support before determining susceptibility to stress-related physical and psychological illnesses. A 6-month score

	of 300 or more or a year-score of 500 or more indicates high stress in a client's life and risk for significant stress-related physical and psychological illness.
4.	This is incorrect. Assessment is the first step in the nursing process. The nurse should assess the client's coping skills and available support before determining susceptibility to stress-related illness. A 6-month score of 300 or more or a year-score of 500 or more on the <i>Recent Life Changes Questionnaire</i> indicates high stress in a client's life is susceptible to significant stress-related physical and psychological illness.

CON: Stress

2. A physically and emotionally healthy client has just been fired. During a routine office visit, he tells the nurse, "Perhaps this was the best thing to happen. Maybe I'll consider pursuing an art degree." The nurse determines the client perceives the stressor of his job loss as:

1. Irrelevant
2. Harm or loss
3. Threatening
4. A challenge

ANS: 4

Chapter: Chapter 1, The Concept of Stress Adaptation

Objective: Discuss adaptive coping strategies in the management of stress.

Page: 7

Heading: Stress as a transaction between the individual and the environment

>Individual's Perception of the Event > Primary Appraisal

Integrated Processes: Nursing Process: Assessment

Client Need: Psychosocial Integrity

Cognitive Level: Application [Applying]

Concept: Stress

Difficulty: Easy

	Feedback
1.	This is incorrect. An irrelevant perception is one where the event holds no significance for the individual.
2.	This is incorrect. A harm or loss appraisal refers to damage or loss already experienced by the individual.
3.	This is incorrect. A threatening appraisal is perceived as anticipated harms or losses.
4.	This is correct. The client's statement indicates he perceives the loss of his job as a challenge and an opportunity for growth, demonstrated by his statement to consider an art degree.

CON: Stress

3. Which client statement alerts the nurse that the client may be maladaptively responding to stress?

1. "Avoiding contact with others helps me cope."
2. "I really enjoy journaling; it's my private time."
3. "I signed up for a yoga class this week."
4. "I made an appointment to meet with a therapist."

ANS: 1

Chapter: Chapter 1, The Concept of Stress Adaptation

Objective: Discuss adaptive coping strategies in the management of stress.

Page: 8

Heading: Stress Management

Integrated Processes: Nursing Process: Evaluation

Client Need: Psychosocial Integrity

Cognitive Level: Application [Applying]

Concept: Stress

Difficulty: Easy

	Feedback
1.	This is correct. Reliance on social isolation as a coping mechanism is a maladaptive method to relieve stress. It can prevent learning appropriate coping skills and can prevent access to needed support systems.
2.	This is incorrect. Journaling is a form of adaptive coping and interpersonal communication.
3.	This is incorrect. Group exercise is a form of adaptive coping, relaxation.
4.	This is incorrect. Seeing a therapist is not considered a maladaptive coping method.

CON: Stress

4. A nursing student comes down with a sinus infection toward the end of every semester. Which stage of stress is the student most likely experiencing when this occurs?

1. Alarm reaction
2. Resistance
3. Exhaustion
4. Fight or flight

ANS: 3

Chapter: Chapter 1, The Concept of Stress Adaptation

Objective: Explain the relationship between stress and diseases of adaptation.

Page: 2

Heading: Stress as a Biological Response

Integrated Processes: Nursing Process: Assessment

Client Need: Psychosocial Integrity
 Cognitive Level: Comprehension [Understanding]
 Concept: Stress
 Difficulty: Easy

	Feedback
1.	This is incorrect. At the alarm reaction stage, physiological responses of the fight-or-flight syndrome are initiated.
2.	This is incorrect. At the stage of resistance, the individual uses the physiological responses of the first stage as a defense in the attempt to adapt to the stressor. Physiological symptoms may disappear.
3.	This is correct. At the stage of exhaustion, the student's exposure to stress has been prolonged, and adaptive energy has been depleted. Diseases of adaptation occur more frequently in this stage.
4.	This is incorrect. The fight-or-flight syndrome occurs during the alarm reaction stage.

CON: Stress

5. A school nurse is assessing a high school student who is overly concerned about her appearance. The client's parent states, "That's not something to be stressed about!" Which response by the nurse is best?

1. "Teenagers don't truly understand stress."
2. "Why are you so concerned about your appearance?"
3. "You surely know that isn't something to be concerned with."
4. "I understand you feel stressed about this; tell me more about your stress."

ANS: 4

Chapter: Chapter 1, The Concept of Stress Adaptation
 Objective: Describe the core concept of stress as an environmental event.
 Page: 8
 Heading: Stress as a Transaction Between the Individual and the Environment
 Integrated Processes: Nursing Process: Implementation
 Client Need: Psychosocial Integrity
 Cognitive Level: Application [Applying]
 Concept: Stress
 Difficulty: Moderate

	Feedback
1.	This is incorrect. This response is judgmental and nontherapeutic. This response minimizes the student's concerns.
2.	This is incorrect. This response puts the student in a defensive position to justify her feelings. It is nontherapeutic.
3.	This is incorrect. This is a nontherapeutic response that minimizes the student's
