## TEST BANK

# **Illustrated Dental Embryology Histology and Anatomy**

Margaret J. Fehrenbach

5th Edition

## Chapter 01: Introduction to Head and Neck Anatomy Fehrenbach: Illustrated Anatomy of the Head and Neck, 5th Edition

#### MULTIPLE CHOICE

- 1. Which surface of the body is visualized by the clinician when performing an extra oral examination of the patient's eyes?
  - a. Anterior
  - b. Posterior
  - c. Superior
  - d. Lateral

ANS: A

	Feedback
Α	The patient's eyes are visualized on the anterior surface of the patient's body.
В	The patient's eyes would NOT be easily visualized on the posterior of the pa
	tient's body.
С	The patient's eyes would NOT be easily visualized on the superior surface of t
	he patient's body.
D	The patient's eyes would NOT be easily visualized on the lateral surface of the
	patient's body.

DIF: Comprehension REF: p. 3

OBJ: 2 TOP: CDA: General Chairside, I. B. Preliminary Phys

ical Examination

MSC: NBDHE, Scientific BasiN for Dental Hygiene Practice, 1.1.1 Head and Neck Anatomy

- 2. Which of the following is CORRECT concerning the sagittal plane of the body?
  - a. Parallel to the median plane
  - b. Parallel to the frontal plane
  - c. Parallel to the horizontal plane
  - d. Parallel to the coronal plane

ANS: A

	Feedback
Α	A sagittal plane is parallel to the median plane.
В	A sagittal plane is NOT parallel to the frontal plane but perpendicular.
С	A horizontal plane is perpendicular to the median plane. A sagittal plane is p arallel to the median plane. Thus a horizontal plane is perpendicular to a sagittal plane.
D	A sagittal plane is NOT parallel to the coronal plane but perpendicular.

DIF: Recall REF: p. 3 OBJ: 1

my, physiology, and development

MSC: NBDHE, Scientific Basis for Dental Hygiene Practice, 1.1 Anatomy

- 3. When a patient is in anatomic position, what is the surface of the palms of the hand considered?
  - a. Anterior
  - b. Lateral
  - c. Medial
  - d. Posterior

ANS: A

	Feedback
Α	The palms of the hands in anatomic position are facing toward the front and ar
	e anterior (or ventral).
В	The palms of the hands in anatomic position are NOT facing lateral or away
	from the median plane but are facing toward the front and are anterior (or ve
	ntral).
С	The palms of the hands in anatomic position are NOT facing medial or towar
	d the median plane but are facing toward the front and are anterior (or vent
	ral).
D	The palms of the hands in anatomic position are NOT facing toward the
	posterior or back of the body but are facing toward the front and are anterior (
	or ventral).

- 4. What is the anatomic relationship of the right arm to the left leg?
  - a. Sagittal
  - b. Contralateral
  - c. Ipsilateral
  - d. Midsagittal

ANS: B

	Feedback
Α	The two legs are contralateral to each other. Sagittal describes a plane of divisi on of the body created by an imaginary plane parallel to the median plane.
В	Contralateral structures are located on the opposite side of the body, which is t he anatomic relationship of the right arm to the left leg.
С	Ipsilateral refers to structures on the same side of the body; in contrast, the two legs are contralateral to each other and thus are located on the opposit e side of the body.
D	The two legs are contralateral to each other. Midsagittal describes a plane that divides the body into right and left halves.

TOP: CDA: General Chairside, I. A. Demonstrate understanding of basic oral and dental anato

my, physiology, and development

MSC: NBDHE, Scientific Basis for Dental Hygiene Practice, 1.1 Anatomy

- 8. Which of the following describes a patient's eyes when they are in anatomic position?
  - a. Closed tightly
  - b. Looking toward the lateral
  - c. Looking toward the medial
  - d. Looking straight forward

ANS: D

	Feedback
Α	The patient's eyes in anatomic position are open and look forward.
В	The patient's eyes in anatomic position are open and look forward.
С	The patient's eyes in anatomic position are open and look forward.
D	The patient's eyes in anatomic position are open and look forward.

MSC: NBDHE, Scientific Basis for Dental Hygiene Practice, 1.1.1 Head and Neck Anatomy

- 9. What is the anatomic relationship of the maxillary arch to the mandibular arch?
  - a. Deep
  - b. Inferior
  - c. Superior
  - d. Superficial

ANS: C

	Feedback
Α	The maxillary arch is superior to the mandibular arch. Deep refers to structur
	es that are located away from the body surface.
В	The maxillary arch is superior to the mandibular arch. Inferior refers to surface
	s closer to the feet or that face toward the feet.
С	The maxillary arch is superior to the mandibular arch.
D	The maxillary arch is superior to the mandibular arch. Superficial refers to stru
	ctures located toward the surface of the body.

DIF: Comprehension REF: p. 3 OBJ: 2

TOP: CDA: General Chairside, I. A. Demonstrate understanding of basic oral and dental anatomy, physiology, and development

MSC: NBDHE, Scientific Basis for Dental Hygiene Practice, 1.1.1 Head and Neck Anatomy

- 10. What is the anatomic relationship of the teeth located in the front of the mouth to the teeth located in the back of the mouth?
  - a. Anterior
  - b. Medial

c. Posteriord. Superficial

ANS: C

	Feedback
Α	Teeth located in the back of the mouth are considered posterior. Teeth located i
	n the front of the mouth are considered anterior.
В	Medial refers to structures located closer to the median plane.
С	Teeth located in the back of the mouth are considered posterior to teeth locate
	d
	in the front of the mouth, which are considered anterior.
D	Superficial refers to structures located closer to the surface of the body.

DIF: Comprehension REF: p. 3 OBJ: 2

TOP: CDA: General Chairside, I. A. Demonstrate understanding of basic oral and dental anato my, physiology, and development

MSC: NBDHE, Scientific Basis for Dental Hygiene Practice, 1.1.2 Dental Anatomy

- 11. The inner side of the wall of a hollow structure is referred to as internal. In contrast, the outer side of the wall of a hollow structure is external.
  - a. Both statements are true.
  - b. Both statements are false.
  - c. The first statement is true; the second is false.
  - d. The first statement is false; the second is true.

ANS: A

	Feedback
Α	Both statements are true. The inner side of the wall of a hollow structure is r eferred to as internal. The outer side of the wall of a hollow structure is ext ernal.
В	Both statements are true. The inner side of the wall of a hollow structure is referred to as internal. The outer side of the wall of a hollow structure is ext ernal.
С	Both statements are true. The inner side of the wall of a hollow structure is referred to as internal. The outer side of the wall of a hollow structure is ext ernal.
D	Both statements are true. The inner side of the wall of a hollow structure is referred to as internal. The outer side of the wall of a hollow structure is ext ernal.

- 12. What is another term for a transverse section?
  - a. Vertical section
  - b. Horizontal section
  - c. Anterior section

### d. Posterior section

ANS: B

	Feedback
Α	The transverse section or horizontal section is a division through a horizontal p
	lane.
В	The transverse section or horizontal section is a division through a horizontal p
	lane.
С	The transverse section or horizontal section is a division through a horizontal p
	lane.
D	The transverse section or horizontal section is a division through a horizontal p
	lane.

- 13. An area closer to the median plane is considered to be distal, and an area farther from the median plane is considered proximal.
  - a. Both statements are true.
  - b. Both statements are false.
  - c. The first statement is true; the second is false.
  - d. The first statement is false; the second is true.

ANS: B

	Feedback
Α	Both statements are false. An area closer to the median plane is considered to
	be proximal, and an area farther from the median plane is considered distal.
В	Both statements are false. An area closer to the median plane is considered to
	be proximal, and an area farther from the median plane is considered distal.
С	Both statements are false. An area closer to the median plane is considered to
	be proximal, and an area farther from the median plane is considered distal.
D	Both statements are false. An area closer to the median plane is considered to
	be proximal, and an area farther from the median plane is considered distal.

DIF: Recall REF: p. 3 OBJ: 1

- 14. Structures on the same side of the body are considered ipsilateral. Structures on the oppo site side of the body are considered contralateral.
  - a. Both statements are true.
  - b. Both statements are false.
  - c. The first statement is true; the second is false.
  - d. The first statement is false; the second is true.

ANS: A

	Feedback
Α	Both statements are true. Structures on the same side of the body are conside red ipsilateral. Structures on the opposite side of the body are considered contralateral.
В	Both statements are true. Structures on the same side of the body are considere d ipsilateral. Structures on the opposite side of the body are considered contrala teral.
С	Both statements are true. Structures on the same side of the body are conside red ipsilateral. Structures on the opposite side of the body are considered contralateral.
D	Both statements are true. Structures on the same side of the body are considere d ipsilateral. Structures on the opposite side of the body are considered contralateral.

DIF: Recall REF: p. 3 OBJ: 1

TOP: CDA: General Chairside, I. A. Demonstrate understanding of basic oral and dental anato

my, physiology, and development

- 15. The number of bones and muscles in the head and neck is NOT usually constant, and spe cific details of these structures can vary from patient to patient.
  - a. Both statements are true.
  - b. Both statements are false.
  - c. The first statement is true; the second is false.
  - d. The first statement is false; the second is true.

ANS: D

	7 N 1
	Feedback
Α	The first statement is false; the second is true. The number of bones and musc
	les
	in the head and neck is usually constant, but specific details of these structur
	es can vary from patient to patient.
В	The first statement is false; the second is true. The number of bones and mus
	cles in the head and neck is usually constant, but specific details of these st
	ructures can vary from patient to patient.
С	The first statement is false; the second is true. The number of bones and musc
	les
	in the head and neck is usually constant, but specific details of these structur
	es can vary from patient to patient.
D	The first statement is false; the second is true. The number of bones and mus
	cles in the head and neck is usually constant, but specific details of these st
	ructures can vary from patient to patient.

ical Examination

MSC: NBDHE, Provision of Clinical Dental Hygiene Services, 1.0 Assessing Patient Characteristics

16. The median plane is created by an imaginary line dividing the body into equal right and left halves. On the surface of the body, these halves are NEVER symmetric in structure.

a. Both statements are true.

- b. Both statements are false.
- c. The first statement is true; the second is false.
- d. The first statement is false; the second is true.

ANS: C

	Feedback
A	The first statement is true; the second is false. The median plane or midsagitt al plane is created by an imaginary line dividing the body into equal right and left halves. On the surface of the body, these halves are generally symmetric in structure, yet the same symmetry does NOT apply to all internal structures.
В	The first statement is true; the second is false. The median plane or midsagitt al plane is created by an imaginary line dividing the body into equal right and left halves. On the surface of the body, these halves are generally symmetric in structure, yet the same symmetry does NOT apply to all internal structures.
С	The first statement is true; the second is false. The median plane or midsagitt al plane is created by an imaginary line dividing the body into equal right and left halves. On the surface of the body, these halves are generally symmetric in structure, yet the same symmetry does NOT apply to all internal structures.
D	The first statement is true; the second is false. The median plane or midsagitt al plane is created by an imaginary line dividing the body into equal right and left halves. On the surface of the body, these halves are generally symmetric in structure, yet the same symmetry does NOT apply to all internal structures.

DIF: Recall REF: p. 3 OBJ: 2

TOP: CDA: General Chairside, I. A. Demonstrate understanding of basic oral and dental anatomy, physiology, and development

MSC: NBDHE, Scientific Basis for Dental Hygiene Practice, 1.1 Anatomy

- 17. An area closer to the median plane of the body or structure is considered lateral. An area farther from the median plane of the body or structure is considered proximal.
  - a. Both statements are true.
  - b. Both statements are false.
  - c. The first statement is true; the second is false.
  - d. The first statement is false; the second is true.

ANS: B

	Feedback
Α	Both statements are false. An area closer to the median plane of the body or
	structure is considered medial. An area farther from the median plane of the
	body or structure is considered lateral, and an area closer to the median plane i
	s considered to be proximal.
В	Both statements are false. An area closer to the median plane of the body o
	r structure is considered medial. An area farther from the median plane of t
	he body or structure is considered lateral, and an area closer to the median pl
	ane is
	considered to be proximal. Within the dentition, the proximal surface would be considered mesial.

С	Both statements are false. An area closer to the median plane of the body or structure is considered medial. An area farther from the median plane of the
	body or structure is considered lateral, and an area closer to the median plane i s considered to be proximal.
D	Both statements are false. An area closer to the median plane of the body or structure is considered medial. An area farther from the median plane of the body or structure is considered lateral, and an area closer to the median plane is considered to be proximal.

- 18. What is another term for coronal plane?
  - a. Frontal plane
  - b. Coronal section
  - c. Horizontal plane
  - d. Horizontal section

ANS: A

	Feedback
Α	A frontal plane or coronal plane is created by an imaginary line dividing the
	body at any level into both anterior and posterior parts.
В	The frontal plane or coronal section is a division through any frontal plane.
С	A horizontal plane is created by an imaginary line dividing the body at any le
	vel
	into superior and inferior parts and is always perpendicular to the median plan
	e.
D	The transverse section of horizontal section is a division through a horizontal
	plane.

DIF: Recall REF: p. 3 OBJ: 1
