Table of Contents

Chapter 1 Introduction to Health Assessment

Chapter 2 Critical Thinking in Health Assessment

Chapter 3 Interviewing and Communication

Chapter 4 The Health History

Chapter 5 Cultural and Spiritual Assessment

Chapter 6 Physical Examination: Getting Started

Chapter 7 Beginning the Physical Examination: General Survey, Vital Signs, and Pain

Chapter 8 Nutrition and Hydration

Chapter 9 The Integumentary System

Chapter 10 The Head and Neck

Chapter 11 The Eyes

Chapter 12 Ears, Nose, Mouth, and Throat

Chapter 13 The Respiratory System

Chapter 14 The Cardiovascular System

Chapter 15 The Peripheral Vascular System

Chapter 16 The Gastrointestinal and Renal Systems

Chapter 17 The Breasts and Axillae

Chapter 18 The Musculoskeletal System

Chapter 19 Mental Status

Chapter 20 The Nervous System

Chapter 21 Reproductive Systems

Chapter 22 Putting it All Together

Chapter 23 Assessing Children: Infancy Through Adolescence

Chapter 24 Assessing Older Adults

Chapter 1 Introduction to Health Assessment

Multiple Choice

1. For which of the following patients would a comprehensive health history be appropriate?

- A) A new patient with the chief complaint of —I sprained my ankle
- B) An established patient with the chief complaint of —I have an upper respiratory infection
- C) A new patient with the chief complaint of —I am here to establish care
- D) A new patient with the chief complaint of —I cut my hand

Ans: C

Chapter: 01

Page and Header: 4, Patient Assessment: Comprehensive or Focused

Feedback: This patient is here to establish care, and because she is new to you, a comprehensive health history is appropriate.

2. The components of the health history include all of the following except which one?

- A) Review of systems
- B) Thorax and lungs
- C) Present illness
- D) Personal and social items

Ans: B

Chapter: 01

Feedback: The thorax and lungs are part of the physical examination, not part of the health history. The other answers are all part of a complete health history.

3. Is the following information subjective or objective?

Mr. M. has shortness of breath that has persisted for the past 10 days; it is worse with activity and relieved by rest.

- A) Subjective
- B) Objective

Ans: A

Chapter: 01

Feedback: This is information given by the patient about the circumstances of his chief complaint. It does not represent an objective observation by the examiner.

4. Is the following information subjective or objective? Mr. M. has a respiratory rate of 32 and a pulse rate of 120.

- A) Subjective
- B) Objective

Ans: B Chapter: 01

Feedback: This is a measurement obtained by the examiner, so it is considered objective data. The patient is unlikely to be able to give this information to the examiner.

5. The following information is recorded in the health history: —The patient has had abdominal pain for 1 week. The pain lasts for 30 minutes at a time; it comes and goes. The severity is 7 to 9 on a scale of 1 to 10. It is accompanied by nausea and vomiting. It is located in the mid- epigastric area.¶

Which of these categories does it belong to?

- A) Chief complaint
- B) Present illness
- C) Personal and social history
- D) Review of systems

Ans: B Chapter: 01

Feedback: This information describes the problem of abdominal pain, which is the present illness. The interviewer has obtained the location, timing, severity, and associated manifestations of the pain. The interviewer will still need to obtain information concerning the quality of the pain, the setting in which it occurred, and the factors that aggravate and alleviate the pain. You will notice that it does include portions of the pertinent review of systems, but because it relates directly to the complaint, it is included in the history of present illness.

6. The following information is recorded in the health history: —The patient completed 8th grade. He currently lives with his wife and two children. He works on old cars on the weekend. He works in a glass factory during the week.¶

Which category does it belong to?

- A) Chief complaint
- B) Present illness
- C) Personal and social history
- D) Review of systems

Ans: C Chapter: 01

Feedback: Personal and social history information includes educational level, family of origin, current household status, personal interests, employment, religious beliefs, military history, and lifestyle (including diet and exercise habits; use of alcohol, tobacco, and/or drugs; and sexual preferences and history). All of this information is documented in this example.

7. The following information is recorded in the health history: —I feel really tired.¶

Which category does it belong to?

- A) Chief complaint
- B) Present illness
- C) Personal and social history
- D) Review of systems

Ans: A Chapter: 01

Feedback: The chief complaint is an attempt to quote the patient's own words, as long as they are suitable to print. It is brief, like a headline, and further details should be sought in the present illness section. The above information is a chief complaint.

8. The following information is recorded in the health history: —Patient denies chest pain, palpitations, orthopnea, and paroxysmal nocturnal dyspnea.¶

Which category does it belong to?

- A) Chief complaint
- B) Present illness
- C) Personal and social history
- D) Review of systems

Ans: D

Feedback: Review of systems documents the presence or absence of common symptoms related to each major body system. The absence of cardiac symptoms is listed in the above example.

9. The following information is best placed in which category? —The patient has had three cesarean sections.¶

- A) Adult illnesses
- B) Surgeries
- C) Obstetrics/gynecology
- D) Psychiatric

Ans: B Chapter: 01

Feedback: A cesarean section is a surgical procedure. Approximate dates or the age of the patient at the time of the surgery should also be recorded.

10. The following information is best placed in which category?

—The patient had a stent placed in the left anterior descending artery (LAD) in 1999.¶

- A) Adult illnesses
- B) Surgeries
- C) Obstetrics/gynecology
- D) Psychiatric

Ans: A Chapter: 01

Feedback: The adult illnesses category is reserved for chronic illnesses, significant hospitalizations, significant injuries, and significant procedures. A stent is a major procedure but does not involve a surgeon.

11. The following information is best placed in which category?

—The patient was treated for an asthma exacerbation in the hospital last year; the patient has never been intubated.¶

- A) Adult illnesses
- B) Surgeries
- C) Obstetrics/gynecology
- D) Psychiatric

Ans: A Chapter: 01

Feedback: This is information about a significant hospitalization and should be placed in the adult illnesses section. If the patient is being seen for an asthma exacerbation, you may consider placing this information in the present illness section, because it relates to the chief complaint at that visit.
